

# SDoH Risk Analyzer

Identify and address the SDoH risk factors that influence your population's access to care and health outcomes.

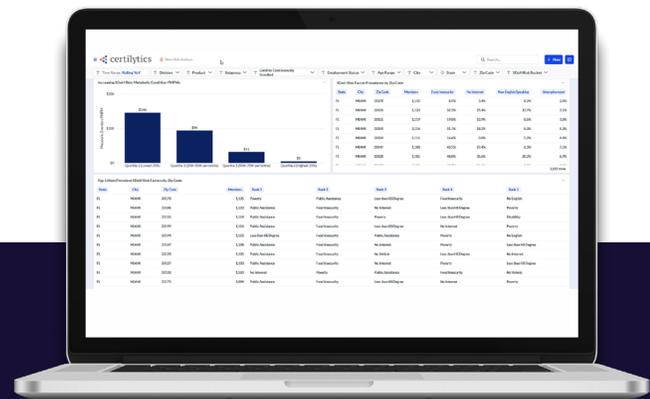

A population's health is shaped by more than clinical care. Social, economic, and environmental factors—known as Social Determinants of Health (SDoH)—strongly influence outcomes.

Certilytics' **SDoH Risk Analyzer** delivers insights that help organizations understand the specific social risk factors affecting their population and design strategies to remove barriers to care, such as targeted outreach, plan design changes, telehealth, mobile programs, and community resource connections.

These insights are powered by Certilytics SDoH Index Score, which predicts member level risk for adverse events using factors like transportation access, food availability, and unemployment.

With the SDoH Analyzer, you are able to:

- See a breakdown of your population by low, medium and high SDoH risk
- Evaluate a population's SDoH Index Score by zip code
- Connect SDoH factors to patterns in healthcare utilization and cost drivers
- Identify SDoH risk factors prevalence by zip code
- Create a member-level list of individuals with emerging risk (low financial risk and high SDoH risk) to help design and deliver targeted initiatives

# About Us

## AI-powered Healthcare Intelligence

For more than 12 years Certilytics has been delivering enriched healthcare data assets and predictive analytics to many of the country's leading healthcare organizations. Customers trust us with their data and value the predictive insights we provide because they see the positive impact it is having on their business.

### By the Numbers

#### Unmatched Data Processing

**30M+** lives processed weekly  
**250M+** lives on platform

#### Unrivalled Predictive Modeling

**67 billion** scores  
**1,000+** healthcare models

#### Uncovering Powerful Insights

**\$10B+** in savings identified  
**\$200 PMPY** in savings
